Environmental Management System

Storz Medical AG has introduced an Environmental Management System (EMS) according to DIN EN ISO 14001: 2015, committed to the protection of the environment and endeavors to minimize environmental pollution and conserve resources.

The EMS is part of our integrated management system.

The present environmental policy is binding and provides the framework for setting these annual environmental targets.

Due to the context of our company:

1. We commit ourselves to the continuous improvement of our environmental management system and our environmental performance, which we regularly record and evaluate in the form of key figures.
2. We commit ourselves to comply with all relevant environmental laws, rules and other requirements, such as the requirements of our customers, to which we commit ourselves to secure market access and to future-oriented action.
3. We communicate our environmental policy to our suppliers and contractors and demand, monitor and evaluate their environmental behavior with regards to compliance with all relevant environmental requirements for the delivered products.
4. We strengthen the environmental awareness of our employees through internal communication and training, adapted to the requirements of the integrated management system.
5. We attach great importance to the separation, prevention, recycling and proper disposal of any waste.
6. We provide the management with the resources and human resources needed to implement these environmental objectives.

If you have further questions, I am at your disposal.

Thank you for your support.

STORZ MEDICAL AG
